What's New in AsdeqDocs 3.4

Support for iOS 8

iOS 8 was a significant iOS release that contained many operating system level changes. AsdeqDocs 3.4 has been adapted and tested for iOS 8.

SharePoint Online Source Location

AsdeqDocs Server now supports adding Office365 SharePoint Online sites as source locations.

HP RecordsManager 8 Source Location

AsdeqDocs Server can now connect and sync with HP Records Manager 8 source locations

Advanced Settings Screen

The iOS version of AsdeqDocs contains a new Advanced Settings screen that allows you to perform an index rebuild, and enter or exit "Safe Mode"

The application will now automatically rebuild the index in the event of index corruption, and enter Safe Mode if a crash occurs during a sync.

Other Changes

- Significant improvements in sync and scanning performance. There are several new settings that allow for performance tuning - talk to AsdeqLabs support.
- Improvement of SharePoint scanning and upload code. Version 3.4 is a recommended update for all SharePoint users.
- Large performance improvements scanning TRIM and Records Manager source locations. Note that updating to AsdeqDocs Server 3.4 requires updating the TRIM agent.
- TRIM source locations can now use the free text name for documents instead of the structured TRIM Name
- Support for the AsdeqDocs Client API on Windows.
- Mitigation of the POODLE SSL vulnerability. The AsdeqDocs server by default no longer offers SSLv3 as a protocol.
- The Fileshare / SMB channel now better supports running against a distributed file share (DFS) when running on a windows server
- Many bug fixes and minor improvements.
